

## Minimum feed-in tariff review 2020-21

### Submission received through Engage Victoria

Date submitted: 4 December 2019

Submission written by: Anonymous

On 3 December 2019, we published our draft decision for the Minimum feed-in tariff review 2020-21. This draft decision paper asks stakeholders for their views on our proposed minimum feed-in tariff for 2020-21.

#### 1. What do you think of the proposed minimum feed-in tariff for 2020-21?

Absolutely disgraceful. Here we go again where the small guy cops it again. How about parity pricing where if the householder has to buy electricity at 24 c/kwh then the electricity company has to pay them 24 c/kwh for any power exported to the grid. Stop trying to prop up a corrupt system by continuing to roll over for the government and the power companies. The government is trying to look squeaky clean and the power companies need to update their power generation technologies but not at the expense of the consumers. How about some forward planning? Where was the forward planning when they shutdown Hazelwood? What has ANYONE done to replace its capacity. All it has done is create artificial shortages to drive up electricity costs.
