

# Minimum feed-in tariff 2023-24

## Submission received through Engage Victoria

Date submitted: 20/12/2022

Submission written by: Anonymous 2

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria ([www.engage.vic.gov.au](http://www.engage.vic.gov.au)). On this website, people were given the opportunity to send us a response to a set of questions we provided.

### **What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?**

The variable rate does not make a lot of sense as most solar is only available during the day when the sun is out. Only wind could potentially be used at this time.

### **What parts of our proposed methodology should we change?**

The minimum Feed-in tariff is too low. With the price of electricity going up and the feed-in going down I just don't understand why people would invest in solar.

### **For our overall methodology, or parts of it, what alternative methodologies should we consider?**

Consideration should be given to the price of electricity and what the federal government is trying to do to bring down the cost. Surely renewables are the way to go?
