

Minimum feed-in tariff 2023-24

Submission received through Engage Victoria

Date submitted: 20/12/2022

Submission written by: Anonymous 3

From December 2022, we began accepting submissions on our Minimum feed-in tariff review 2023-24 via Engage Victoria (www.engage.vic.gov.au). On this website, people were given the opportunity to send us a response to a set of questions we provided.

What parts of our proposed methodology for setting the minimum single and time-varying feed-in tariff rates do you consider are appropriate?

I agree non solar customers should not pay more than Solar customers.

Consideration should also be given to the financial outlay to install a solar system.

What parts of our proposed methodology should we change?

Solar feed in tariffs should not be allowed to increase the power companies bottom line.

Being paid 4 odd cents per kw but paying 25+ cents to purchase electricity.

This is a handy profit for the power providers.

A feed in tariff of at least 15 -20 cents would be fairer for those with solar systems and not be unfair to those who do not given the substantial outlay for the system.

For our overall methodology, or parts of it, what alternative methodologies should we consider?

Increasing the feed in tariff to a reasonable amount.
