Solar Energy

9/2/16

Dear Sir/Madam,

I think it is totally unfair that the Energy Companies are selling the clean energy that my solar panels produce to people who do not have the panels.

We get a miserly 5c or there or less per kilowatt per hour and they sell this to say my neighbour who doesn't have solar for 6 to 7 times the rate that I get or all Victorians get.

People with solar panels in Victoria are getting totally ripped off by these energy companies and also ripping off the people who haven't been able to afford the panels. We are doing our bit for Climate Change so how about you join in and give your children and grandchildren a cleaner future.

I hope you listen to the people.
